The Post Falls High School/Discover Technology/LCF Enterprises/Bay Shore Systems/Itron, Inc FIRST Robotics team, Roboteknix Team #2865, is currently seeking your support so it can have a successful year of designing and building a robot to compete in the FIRST challenge (www.usfirst.org).

We only have a six-week window to accomplish building the robot, programming it, and shipping it to the competition site. Students and mentors have been working after school and on weekends and in six weeks they have put in 6,000+ Man-hours on the project. This is a hard working group of students involved in a very challenging academic and technical international competition.

Your support will make the difference!

FIRST Robotics was founded in 1989 with the purpose of giving high school students the opportunity to gain hands-on experience with sciences such as; computer programming, electrical engineering, physics, pneumatics, and structural engineering. We have the drive, the skills and the ability to compete. We need the mentors, the support, and the chance to push ourselves to our limits. Your donation will assist our young men and women in their pursuit of excellence and real-world experience. ***This is not just about education, this is about workforce development.***

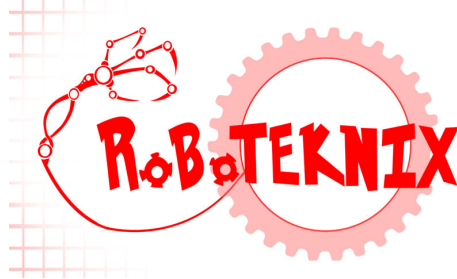

For our sponsors we would like to offer some return on investment as well. The skills and personal traits developed through this program in individuals are those same skills employers are seeking. If you or your company want to see young people working hard, staying under budget, managing their time and resources, working well with others, and developing leadership and responsibility experience, you should consider this a donation towards just that. While we provide students with the hardest fun they've ever had, we would like to you know that we are also developing workforce readiness for local employers. For sponsors or potential sponsors who want to see more, the robot and some handlers could be available at events for your company as well. Larger contributors will be mentioned in any and all press releases related to the team.

The FIRST Robotics regional events are a great place to advertise! Not only are they filled with professionals, they also attract a large audience of young engineers, technology oriented students and their families and supporters. If you support our team, we will make sure everyone knows that you are part of the team!
